

Managed Hosting Specifications

Flow SaaS managed hosting specifications

Flow SaaS is a Java application that runs on a SQL database. It is hosted by Beetext and available as a service on a subscription basis. The following is a summary description of the current server hardware configuration and environment in place to host the Flow SaaS applications.

Material

- Dual Core Xeon 3.0 GHz (RAID 5)
- 8 Gb RAM
- Diesel generator backup
- Daily information backup
- Monthly external backup (in case of disaster)

Internet Connection

- Redundant high speed internet connection provided by four separate ISPs
- 10 Gigabytes of transfer per month

Security

- Controlled environment with surveillance
- Restricted access to Beetext staff with high-security clearance
- Redundant firewall

Assistance

- Intervention within four working hours following the incident
- The servers are monitored at all times. In case of failure, our IT department is automatically notified.

For more information please contact your Beetext sales representative or account manager.
